

Territory-specific data on the relative frequency of given names in the population of U.S. territory births where the individual has a Social Security Number

(Tabulated based on Social Security records as of March 1, 2026)

We created files for Puerto Rico (PR.txt) and all other territories combined (TR.txt). These other territories — American Samoa, Guam, Northern Mariana Islands, and U. S. Virgin Islands — are less populated and have relatively few births.

Each record in a file has the format: 2-digit territory code (PR or TR), sex (M = male or F = female), 4-digit year of birth (starting with 1998), the 2-15 character name, and the number of occurrences of the name. Fields are delimited with a comma. Each file is sorted first on sex, then year of birth, and then on number of occurrences in descending order. When there is a tie on the number of occurrences names are listed in alphabetical order. This sorting makes it easy to determine a name's rank. The first record for each sex & year of birth has rank 1, the second record has rank 2, and so forth.

To safeguard privacy, we restrict our lists of names to those with at least 5 occurrences.
